

Super Passcode — History

9.70 (2021/06/11)

Features

- Tested templates and updated installer for Clarion 11.1.

9.60 (2018/10/10)

Features

- Tested templates and updated installer for Clarion 11.0.

9.52 (2015/08/19)

Features

- Further adjustments for Clarion 10.0

9.50 (2015/03/08)

New Password!

We no longer officially support Clarion 7 and earlier versions!

Features

- Tested templates and updated installer for Clarion 10.0.

9.17 (2014/07/27)

Features

- Changed help from HLP to CHM.

9.16 (2014/06/02)

Bugs

- Fixed installer location of RED file and examples.

9.15 (2014/05/18)

Features

- Updated installer for Clarion 9.1.

9.10 (2013/11/04)

- Changed handling of LinkMode and DIIMode switches in multi-app solutions using Clarion legacy template chain. Now it follows the standard, including the base classes in every DLL/EXE (even though it's less efficient).

9.00 (2013/09/01)

New Password!

This is the final version that officially supports Clarion 6!

Features

- Updated installer for the latest Clarion 9.0.

8.00 (2011/06/04)

Features

- Updated installer for the latest Clarion 8.0.

7.40 (2011/05/05)

Features

- Compatible with Clarion 6 through 8.0.

7.30 (2011/01/09)

Features

- Compatible with Clarion 6 through 7.3.

7.20 (2010/06/19)

New Password!

We no longer officially support Clarion 5.5 and earlier versions!

Features

- Compatible with Clarion 6 through 7.2.
- Installer permits overriding of destination folders.

6.62 (2007/11/09)

Features

- Compatible with Clarion 7-Beta.
- Added option *Apply the MASK attribute to the window* to the to the "Enter Passcode" Window settings. (At the time of this release, Clarion 7-Beta has a bug in its MASK support.)
- Screenshots added to help and documentation.

6.50 (2004/10/04)

- Concurrent with Super Stuff 6.50.

6.15 (2004/07/28)

- New Password!

6.12 (2004/06/14)

Bugs

Now we REALLY fixed the "Ordinal out of sequence" link error, which we thought was released with 6.11.

6.11 (2004/05/19)

Bugs

- We fixed the "Ordinal out of sequence" link error. (The lone "@" is no longer incorrectly generated in *.EXP.)

6.10 (2004/05/15)

Features

- Compatible with Clarion 6.1.

6.03 (2004/03/02)

Features

- We've added the option of calling an alternate procedure to display the machine code and date. This gives you the opportunity not only to display this basic information, but also to show contact details, or anything else that suits your fancy. Eventually we will be enhancing this to support improved registration automation.
- Now the PassDate, ExpiryDate and TrialDate fields in your config file can each use an encryption code different from the main Backdoor.

6.02 (2003/12/15)

Features

- On the Hooks/Tasks tab, you can specify the "InitShowPass" and "UpdateCodes" settings when creating a ShowPass utility for 6-digit passcodes too. See "Automating ShowPass" in the docs for more information.

6.01 (2003/12/02)

Features

- Compatible with Clarion 6.

Bugs

- Fixed problem with support for MultiProject.

5.00 (2001/03/03)

Features

- Compatibility with C5 through C55a.
- New Client/Server support.
- New 15-digit Passcodes, which can direct the program to perform special tasks.

- Optionally create your own FetchConfig function.
- New "Trial Mode in effect" message at program start-up.
- Tweak the seed value to make the Passcode more unpredictable.
- Optionally create a function for the trial start date using your transaction file. This prevents people from deleting their config files to start a new trial.
- If you don't want to use the BIOS or hard-drive serial number, you can create a function to provide the Machine Code from another source.
- Support for CapeSoft's MultiProject.

Bugs

- If the user started entering a forced new Passcode but decided to cancel, the old passcode wasn't remembered.

4.12

Bugs

- ShowPass codes didn't always match application passcodes.

4.10

Bugs

- Fixed problem with using alphanumeric backdoor in ShowPass.

4.00

Features

- Compatible with Clarion 4 ABC templates
- 32-bit support using hard drive serial number
- Added BIOS uniqueness maximizer
