

Super Stuff (MH) — History

9.70 (2021/06/11)

Features

- Tested templates and updated installer for Clarion 11.1.

9.60 (2018/10/10)

Features

- Tested templates and updated installer for Clarion 11.0.

9.52 (2015/08/19)

Features

- Further adjustments for Clarion 10.0

Installer

- Re-included files for "Proper" feature, which had been renamed to MHProper.

9.51 (2015/03/18)

Installer

- Missed files StMhFocus.*

9.50 (2015/03/08)

New Password!

We no longer officially support Clarion 7 and earlier versions!

Features

- Tested templates and updated installer for Clarion 10.0.

9.17 (2014/07/27)

Features

- Changed help from HLP to CHM.

9.16 (2014/06/02)

Bugs

- Fixed installer location of RED file and examples.

9.15 (2014/05/18)

Features

- Updated installer for Clarion 9.1.

9.10 (2013/11/04)

- Changed handling of LinkMode and DIIMode switches in multi-app solutions using Clarion legacy template chain. Now it follows the standard, including the base classes in every DLL/EXE (even though it's less efficient).

9.00 (2013/09/01)

New Password!

This is the final version that officially supports Clarion 6!

Features

- Updated installer for the latest Clarion 9.0.
- Option to block Minimize button on MDI children.
- Extended Threaded Browse+Form support to legacy template chain.
- "Ask Date Range for Report" supports CPCS.
- For legacy chain, added derived methods for BeforeResize and AfterResize, as well as an embed in the RefreshWindow on Resize method.
- For legacy chain, added option to suppress BUFFER statement in mhView.
- DropMenu and DropButton can use !VariableName instead of plain text.

Bugs

- Fixed problem with Threaded Browse+Form that could cause error messages and/or lockups in some situations.
- Fixed problem with #GROUP name in EmbedPoints extension.

8.10 (2012/06/29)

Features

- Resize can prevent maximize operations (going instead to "full size"). It can also force MDI children to open maximized and state maximized. Finally it can also prevent minimizing MDI children.
- New DropMenu and DropButton control templates.
- Reworked Resize templates to be better behaved with Clarion batch 9304.

8.00 (2011/06/04)

Features

- Updated installer for the latest Clarion 8.0.

7.41 (2011/05/08)

Bugs

- Changed PRIORITY(0) to PRIORITY(1), as Clarion 8 no longer supports this undocumented value.

7.40 (2011/05/05)

Features

- Compatible with Clarion 6 through 8.0.

Bugs

- Fixed problem with DropButton lists not properly overlapping controls.

7.30 (2011/01/09)

Features

- Compatible with Clarion 6 through 7.3.

7.20 (2010/06/05)

New Password!

We no longer officially support Clarion 5.5 and earlier versions!

Features

- Compatible with Clarion 6 through 7.2.
- mhView:
 - Added QUEUE support.
 - (Clarion chain) New option to "Generate Class instead of Routines".
 - Enhanced documentation.
- (ABC) Threaded Browse-Form:
 - Prevent multiple form threads for the same record.
 - Cascade browse close to all associated form threads.
- New "Quicken Date Entry for Regular EIP"
- You can force a procedure to be included in ThisWindow.Run(Number, Request).

- BrowseActiveFilter can display its button text as a tooltip, when your button shows only an icon. Also, if you specify a icon column width of zero, it automatically calculates an appropriate width from the listbox's line height.
- *(ABC)* New DropButton feature, for flexible, modern-looking drop lists.
- Installer permits overriding of destination folders.

6.63 (2008/04/24)

Features

- Resize supports enhanced visual indicators.
- Posts error if you have two resize templates on one window.

Bugs

- Install script was missing STABWTP.INC and CLW.

6.62 (2007/09/24)

Bugs

- Fixed problem with template prompts for Original Horizontal/Vertical Position, along with an erroneous setting in the example.
- During installation, too many files were deleted when attempting to delete conflicting files from old Super Template installation directories.
- *(Clarion)* Fixed typo in mhVIEW, where "UnivAbcReport" needed to be "UnivReport". Also added support for UnivProcess.

6.60 (2007/09/13)

Features

- Compatible with Clarion 7-Beta.
- *(ABC)* Added an option to the Source Open/Close Files template extension to set the procedure name for GlobalErrors.
- *(ABC)* Migrated CallProcMightCancel template from Clarion to ABC chain.
- *(ABC)* The form-based RestoreChildAfterCancel now supports the SaveChangeButton template (in addition to SaveButton). We also improved error handling and memory clean-up.
- *(ABC)* Splitter has option to save and restore its position.
- *(ABC)* New "Disable Resize Template" setting in global extension, for temporarily turning off resize in all procedures in APP.
- *(ABC)* New "Derive Next Method" option in mhView.
- *(Clarion)* Retrofited TabPopups from ABC to Legacy.
- New "Variable" option for initial resize Horizontal and Vertical positions in resize window template.
- New Embed Point Guidance extension template.

Changes

- *(Clarion)* We've added a new global template for "Limit Procedure to One Thread". This must be added to your dictionary APP, along with any APP that uses the pre-existing procedure template.

Bugs

- *(ABC)* Field pair filters were applied in reverse order. In some circumstances, this could have a negative impact on performance.
- Fixed problems with BIND fields.
- *(Clarion)* ToggleActiveDisplay tweaked the browse incorrectly, when the Active column wasn't the first on the left.
- *(ABC)* Problem with restoring previous window position.
- *(ABC)* ToggleActiveDisplay template used a filter ID which caused it to be applied before the regular filters.
- *(ABC)* When using ChangeFirstTab on a Form, ThisWindow.FirstField must be changed, rather than simply changing the tab.
- *(Clarion)* If ABC classes are included in a legacy APP in C6, then duplicate resize equates were found at compile time.
- When Quicken Date changes a field's value, now PROP:Touched is set to true.
- Fixed various problems with WrapBrowse.
- Improved intelligence of template settings for DateLookupButtons.
- Resize toggles PROP:Pixels more efficiently.

6.54 (2004/11/04)

Features

- New Classes tab in ResizeGlobal template. Use it to override the class used for mhResizeFrame, or to specify an alternate default resizing class for all of your windows.
- Bugs
- Fixed problem resizing windows with toolbars.

6.53 (2004/10/07)

Features

- New "Return Value" setting for mhView's Mini-Process tab.
- New button(s) to access embed(s) for record processing.
- Hand-coded Filter for mhView changed to use EXPR prompt, so you can lookup field names, etc.

Bugs

- There was an incongruity between the installer and template, regarding the name of the HLP file.

6.52 (2004/10/06)

Bugs

- Due to looming support issues, we've decided not to carry forward our "MemoryReport" feature to C6x, since that version of Clarion has the equivalent functionality built-in, and switching over is easy. The documentation and examples have been changed to reflect this.

6.51 (2004/10/05)

We have had a number of people report problems after installing 6.50. Most of these were caused by mixed versions on their systems. When you install, if you choose Clarion's root directory (e.g. C:\CLARION6) as your destination, then things "should" go fine. If, however, you specified an alternative (e.g. C:\CLARION\3RDPARTY), then you must perform two extra steps:

1. Copy ST?M*.INC from your destination LIBSRC directory into Clarion's LIBSRC directory.
2. Delete ST??MH*.INC from Clarion's LIBSRC directory.

This topic is covered in more detail in the Troubleshooting section of the documentation.

Bugs

- Fixed problems with "missing" templates in Clarion/Legacy example. (It was actually a corruption in the APP file.)
- Installation now includes STABOUT?.BMP.
- Fixed usage of CHOOSE to correspond with new behavior in 6.1.

6.50 (2004/10/04)

After a long wait, the new documentation and examples are finally complete. But that's not all!!! We've done a major overhaul to almost everything! The vast majority of the templates have been enhanced, and most of the templates that were in only ABC or Clarion/Legacy are now in both (although there are still a few stragglers).

We suggest that you read the documentation from cover to cover, to learn about all the neet stuff. Also take a while exploring the examples (for both ABC and Clarion/Legacy).

Then start making use of the many great features in BoxSoft Super Stuff templates!

NOTE: We renamed all of our files to adhere to an 8.3 format, which Clarion's current 16-bit IDE handles with far fewer quirks. The installation program will delete STABMH* and STCLMH*, which now use the prefixes STAM* and STCM*.

6.15 (2004/07/28)

New Password!

6.12 (2004/06/14)

Features

- Compatible with Clarion 6.1-RC3.

6.12 (2004/06/15)

Bugs

- (ABC) LimitStarts could cause compile errors after non-global code generation.

6.11 (2004/05/15)

Features

- (ABC) Added "Before Insert" embed to Many2Many Drag&Drop.
- (ABC) Added calls to GlobalErrors.SetProceudre to mhSourceFiles. This is optional, but the default is True.
- Compatible with Clarion 6.1.

Bugs

- (ABC) TabPopup would allow hidden and disabled tabs to be selected.

6.10 (2004/01/26)

Features

- (Clarion) Included the Clarion 6 compatible version of the "MikeHanson" template chain. This was formerly the public domain template, and is now part of Super Stuff.
- (Clarion) The legacy mhView templates have been enhanced, including support for CPCS.
- (Clarion) We've added the Quicken-style date entry feature to the legacy chain.
- (Clarion) The legacy resize templates are more stable than the old PD version.
- (Clarion) Changed "Add Max Button" setting to display warning if the developer didn't manually add the MAX attribute to the window format. This was required because assigning that parameter could invoke the state. Also, it matches Super Stuff for ABC now.
- (Clarion) Added support for MultiProject.

6.02 (2003/12/05)

We're not quite finished the docs for Super Stuff, but we know you're hankering to recompile and test your apps with Clarion 6. Therefore, we've decided to release Super Stuff right away. We'll release another version with the finished docs real soon now.

Bugs

- Fixed problem with generation of DLL exports, which could cause an "Ordinal out of sequence" error.

6.01 (2003/12/01)

Features

- Compatible with Clarion 6.
- (Much more will be mentioned here, when the documentation is complete.)

5.05 (2001/07/10)

Features

- Compatible with C55D.
- New ActivityBar template, which provides a "revolving" progress bar for your reports or processes. Rather than attempting to show how much is complete, it continuously grows from left to right, then starts over again when it's full. Consequently, the user realizes that something is still happening.

Bugs

- Fixed a problem with adding automatic queue fields in CLARION4 and C55.
- Fixed a problem with support for CapeSoft's MultiProject.

5.00 (2000/10/08)

Features

- Compatible with C55-cr2.
- This is the last version to support Clarion 4.0!
- Quicken Date Entry now supports GotoStartOfWeek and GotoEndOfWeek.
- There are numerous changes to the Resize support. In particular, we now support saving and restoring of window position and size. There's also a new SplitWindow feature for sizing and positioning contents of the window (when you have two list boxes, for example).
- Added option to Drag&Drop to turn off "Can't Drop Here" cursor.
- Migrated "Choose non-Default Printer" features from legacy templates.
- Many features have been added to the mhViewManager extension template, including support for custom joins, reducing the number of hot fields, extra validation flexibility, ability to suppress call to Init/Kill (so you can call them yourself when appropriate), and process a single record much quicker.
- Added support for CapeSoft's MultiProject.

Bugs

- Dealt with a bunch of bugs in the ThreadedBrowseForm feature
- Fixed a problem with rare circular calls in MH::ViewManager class.
- Fixed a problem with SDD:DragAndDropClass when dropping on a list box.

4.90 (1999/05/10)

Features

- Drag and Drop (Many2Many)

4.14 (1998/10/29)

Features

- New LimitStarts template to limit procedures to one thread

4.10 (1998/09/17)

Features

- New Quicken Date Entry (Clarion Online - November 98)

Bugs

- Problem with WrapBrowse when creating DLLs.

4.10 (1998/09/16)

Features

- New mhWrapBrowse template (Clarion Online - October 98)

4.04 (1998/03/30)

Features

- New mhTabPopup template (Clarion Online - April 98)

4.03 (1998/05/13)

Bugs

- Various minor bug fixes.

4.02 (1998/02/01)

Features

- Converted mhView Template for ABC (Clarion Online - February 98)
